

CHEMICAL PRODUCTS MANAGEMENT POLICY

CURTIEMBRE ARLEI, in accordance with its commitment to take care of the environment, and of the health and safety of its workers and customers, establishes the following principles to ensure the proper management and control of the chemicals purchased and / or used by the organization:

- Commitment of the Senior Management through the definition of responsibilities for ensuring the safety and conformity of manufactured products - PSCR (Product Safety and Conformity Representative), and chemical products management.
- 2. Permanent communication channels with Customers and Suppliers in order to maintain the commitment in the supply chain, ensuring the update and validity of restricted and/or highly hazardous substances (MRSL), according to ZDHC (Zero Discharge of Hazardous Chemicals).
- **3.** Ongoing training of the staff in the awareness and command of good practices in the manufacturing process.
- **4.** Appropriate selection of Suppliers and chemical products based on the criteria for restricted substances established by Arlei and their Customers, prioritizing those products with lower environmental impact, sustainable, and low-risk for people's health and safety.
- **5.** Definition of procedures for the selection, acquisition, transportation, storage, use, handling and safe disposal of chemicals.
- **6.** Implementation of safe working standards, supported by response plans for abnormal or emergency situations.
- 7. Process and risk assessment based approach.
- **8.** Guaranteed identification and traceability, a key tool in chemical products' management.
- **9.** Continuous improvement as a fundamental basis of the company's work philosophy.

To comply with these principles, **CURTIEMBRE ARLEI** establishes and implements an internal process for the proper Management of Chemical Products and spreads this policy to all its staff and supply chain, in order to achieve the alignment of each one of them to the principles established above.
